T-cell receptor gamma chain (1t.60) - mouse (fragment)
C;Species: Mus musculus (house mouse)
C;Species: Mus musculus (house mouse)
C;Date: 03-Feb-1994 #sequence_revision 03-Feb-1994 #text_change 07-May-1999
C;Accession: C41946
R;Whetsell, M.; Mosley, R.L.; Whetsell, L.; Schaefer, F.V.; Miller, K.S.; Klein, J.R.
Mol. Cell. Biol. 11, 5902-5909, 1991
A;Title: Rearrangement and junctional-site sequence analyses of T-cell receptor gamma ger
A;Reference number: A41946; MuID:92049316; PMID:1658619
A;Accession: C41946
A;Ketus: preliminary; not compared with conceptual translation
A;Molecule type: DNA
A;Molecule type: DNA
A;Residues: 1-10 cWHE>
C;Keywords: T-cell receptor
C; Accession: E49033; D49033
R; Morita, C.T.; Verma, S.; Aparicio, P.; Martinez, C.; Spits, H.; Brenner, M.B. Eur., J. Immunol. 21, 2999-3007, 1991
A; Title: Functionally distinct subsets of human gamma/delta T cells.
A; Reference number: A49033; MUID:92083926; PMID:1684157
A; Accession: E49033; MUID:92083926; PMID:1684157
A; Accession: E49033
A; Status: preliminary
A; Molecule type: DNA
A; Status: preliminary
A; Note: sequence extracted from NCBI backbone (NCBIN:72591, NCBIP:72595)

"Labaditin, a novel cyclic decapeptide from the latex of Jatropha multifida L. (Euphorbiacea). Isolation and sequence determination by means of two-dimensional NMR.";
FEBS Lett. 256:91-96 (1989).
-!- FUNCTION: Labaditin is an active peptide which inhibits the classical pathway of complement activation in vitro. Activity esems to be based on an interaction with Cl.
-!- PTM: This is a cyclic peptide.
-!- PTM: This is a cyclic peptide.
-!- MISCELLANEOUS: Latex of this plant is used in folkloric medicine for treatment of infected wounds, skins infections and scabies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Jatropha multifida (Physic nut).

New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.

Claim 13; Page 80; 149pp; English.

The present invention describes an isolated peptide (I) that binds to and inhibits vascular endothelial growth factor receptor 3 (VEGFR-3). (I) have cytostatic, hepatotropic, antiinflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes an isolated peptide (I) that binds to and inhibits vascular endothelial growth factor receptor 3 (VEGFR-3). (I) have cytostatic, hepatotropic, antiinflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          angiogenesis; lymphangiogenesis; vascular endothelial growth factor; cytostatic; hepatotropic; antiinflammatory; hypotensive; antidlabetic; vulnerary; cell surface receptor; cancer; neovascularisation; liver disease; hypertension; post-trauma; chronic hepatitis; haemangioma; diabetes; PDGF; platelet derived growth factor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes an isolated peptide (I) that binds to and inhibits vascular endothelial growth factor receptor 3 (VBGFR-3). (I) have cytostatic, hepatotropic, antiinflammatory, hypotensive, antiidabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VBGFR-3 such as cancer, e.g. brain, lung,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          angiogenesis, lymphangiogenesis, vascular endothelial growth factor; cytostatic; hepatotropic; antiinflammatory; hypotensive; antidiabetic; ulnerary; cell surface receptor; cancer; neovascularisation; liver disease; hypottension; post-trauma; chronic hepatitis; haemangioma; diabetes; PDGF; platelet derived growth factor.
liver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary, skin, head and neck, oesophagus, bone, marrow or blood, and diseases of neovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemangiomas and diabetes. The present sequence represents a specifically claimed VEGFR-3 binding peptide from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.
                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Vascular endothelial growth factor receptor 3 inhibitor; VEGFR-3;

A polymucleotide of the invention may have a use in gene therapy. The polymucleotide and polymetide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The protein sequences shown in ADC85549-ADC87617 represent GPCR's of the invention.
                            pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary, skin, head and neck, oesophagus, bone, marrow or blood, and diseases of meovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemangiomas and diabetes. The present sequence represents a VEGFR-3 binding peptide, which is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polynucleotide, useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    human; GPCR; guanosine triphosphate-binding protein coupled receptor;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            binder pairs comprising mixing in a reaction vessel phage expressing biological targets and phage expressing target binders, each having biological targets and phage expressing target binders, each having distinguishable selection markers and selection target and target binder pairs based on the selection markers. The molecules of the invention demonstrate cytostatic activity whilst the method may be useful for realing target and target binder pairs for preparing a composition for treating cancer. Furthermore, the method may be utilised during gene therapy procedures. The current sequence is that of the cancer-related Tiel-binder peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Selecting target and target binder pairs for preparing a composition for treating cancer by mixing in a reaction vessel phage expressing biological targets and phage expressing target binders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel method of selecting target and target

The invention relates to a method of evaluating sample by providing a soluble serum protein (1), one or more compounds physically associated with (1), and a (1)-binding agent that comprises a peptide that specifically binds to (1), allowing the (1)-binding agent to bind to form a complex including one or more compounds physically associated with (1), separating the complex from one or more components of the sample, and evaluating one or more of the physically associated compounds. The sample compress blood or serum, or is obtained from a biopsy. The sample may also be obtained from a tumour or a region within $5 mm of a tumour. The method is useful for detecting modulators that modulate interaction of serum protein-binding compound and serum protein and for identifying binding ligands for serum protein. The present sequence represents a serum albumin-binding peptide identified using the
                                        Evaluating sample comprising soluble serum protein by forming complex comprising serum protein and physically associated compounds using peptide ligand that specifically binds with proteins, which is separated and evaluated.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                               92
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to novel isolated polypeptides comprising a sequence that binds an immunoglobulin Fc region. The polypeptides are useful as binding molecules for detecting, isolating or purifying immunoglobulin Fc-region polypeptides present in a solution, e.g. blood, plasma or transgenic milk. The Fc-region binding polypeptides are also useful for regulating or preventing an antibody response, or for increasing the half-life and over all stability of a therapeutic or diagnostic compound that is administered to or enters the circulatory system of an individual. This sequence represents an Fc region binding
Immunoglobulin Fc region; binding; whole blood; plasma; transgenic milk; antibody response; half-life; stability; circulatory system.
                                                                                                                                                                                                                                                                                                                                                                                    New polypeptides, useful as binding molecules for detecting, isolating purifying immunoglobulin Fc-region polypeptides present in a solution, for regulating or preventing an antibody response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The present invention describes an isolated polymiciotics (1): (a) when comprising a nucleotide sequence selected from SEQ ID NO:1-244; or (b) comprising a nucleotide sequence selected from SEQ ID NO:1-244; or (b) which encodes a polypeptide with biological activity, where the comprising a polypeptide with biological activity, where the polymucleotide hybridises to (1) under erringent hybridisation conditions or has greater than 99% sequence identity with (1). (1) has respiratory, correspondint estimathritic, antimidabletic and antirheumatic antibacterial, immunosuppressive, antidabletic and antirheumatic corresponding polymucleotides encoding chimeric or fusion proteins and the terrologues protein sequences. The polymucleotides can be used to capress recombinant protein for analysis, characterisation or therapeutic use; as markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags to identify chromosomes or to map related gene positions; to compare with endogenous bNA sequences in patients to compare with endogenous bNA sequences in patients for genesic disorders; as probes to hybridise and discover genes, related bNA sequences; as a source of information to derive pCR primers for genesic for genetic disorders for attachment to a gene chip or other sequences in the process of discovering other novel polymucleotides; for selecting and making oligomers for attachment to a gene chip or other corporations and polymetides can also be used as antiritional secures or as a source of carbohydrates. The compositions are useful for promoting better or faster closure of nor-challing wounds, for the generation and respensation of tissues, or healing wounds, for the generation and respensation in dreatment of lung or liver fibrosis, compositions are useful for promoting better or faster closure of nor-challing wounds, for the generation and respensation and respensation and sequence cytokine damage. The present sequence reperfusion i
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             invention. N.B. The sequences for this patent were obtained from the USPTO web site from an equivalent US patent US20040048249Al.
cancer, lung or liver fibrosis, arthritis, inflammatory bowel disease, Crohn's disease, rheumatoid arthritis, diabetes mellitus type 1 or graft versus host disease.
                                                                                                                                                   The present invention describes an isolated polynucleotide (I): (a)
                                                                                               Example 2; SEQ ID NO 743; 591pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAU90545 standard; peptide; 20 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              63.9%;

The invention relates to a method of modulating insulin activity in receptor (IR). A composition containing a peptide that binds the insulin receptor (IR). A composition containing a peptide, optionally expressed from gene therapy vectors, that binds to Site 1 of IR and an insulin agonist are useful for treating diabetes. Also, peptides that are antagonists of the insulin-like growth factor. (IGF-1) receptor are useful for treating insulin-like growth factor (IGF) sensitive tumours (e.g. of prostate and breast) and diabetic retinopathy, while IGF-1 receptor agonists are useful for treating neurological diseases, including stroke and diabetic neuropathy. The peptides are also useful in screening for compounds that bind to IR or IGF-1 receptor, potential therapeutics and research reagents. AAU88034-AAU90957 represent IR and/or IGF-1 receptor-binding peptides and related amino acid sequences of the
                                                                                                                                                                                                                                                                                                                Modulating insulin activity in mammalian cells, for treating e.g. diabetes and tumors, comprises using peptides that bind to insulin or insulin-like growth factor receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0; Gaps

                                                                                                                                                                                                 normal uterine tissue which can have auticancer and cytostatic activity and can be used for gene therapy. (A) are used (i) for recombinant expression of polypeptides (B) and (ii) to isolate complete genes. (B) are used (i) to identify agents suitable for treatment of uterine cancer; (ii) directly for treating this form of cancer (including expression from gene therapy vectors) and (iii) for generation of specific antibodies. (A) are identified by assembling ESTs (expressed sequence tags) from a particular tissue type before comparison of expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTs from different libraries may represent different parts of the same unknown gene, discorting the estimated frequency of occurrence in a particular tissue. ANYSSB32 represent protein fragments encoded by the human uterine tissue derived CDNA fragments represented in AAZ41325-
                                                                                         New nucleic acid sequences expressed in normal uterine tissues, and derived polypeptides, for treatment of uterine cancer and identification of therapeutic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antisense; prokaryotic essential gene; cell proliferation; drug design.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated continued or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide of specifically binding the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological contains a gene product or that has an activity against a biological pathway contains a gene product or that has an activity against a biological pathway in which a proliferation-required gene or the biological contains a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that strains is present in a culture or collection of the which each of the strains is present in a culture or collection of the strains; or (13) identifying proteins or screening for homologous nucleic acids required contains and activity; (and a compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for for cellular proliferation to solate candidate molecules for rational activity and activity is a compound and activity is a compound and activity is a compound and activity is a compound and activity is a compound and activity is a compound and activity is a compound and activity is a compound and activity or activity is a compound and activity or activity or activity or activity or activity or activity or activi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The present invention relates to an isolated nucleic acid molecule
  The present invention describes a method for detecting a stress that alters a functional interaction of a low density lipoprotein (LDL) recepbor binding procein (I) with an LDL receptor interaction domain (II). The method involves introducing a predetermined stress into a system which provides a stress-biased physical interaction of (I) with a stress-biased physical interaction of (I) where in the absence of the stress, the system provides an unbiased interaction of (I) and (II), where a difference between BI and UI indicates that the stress alters the interaction of (I) and (II), and detecting the stress-biased interaction of (I) and (II), and detecting the stress that alters functional interaction of LDL receptor for detecting a stress that alters functional interaction of LDL receptor interaction domain. The method is useful for detecting and modulating signal transduction through LDL receptors. ABBO4778 to ABBO4909 represent LDL receptor binding proteins which are used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cytostatic; Antiinflammatory; Immunosuppressive; Antibacterial; Virucide; cancer; inflammatory; immune; human secreted protein.
                                                           Detecting stress that alters interaction of LDL receptor binding polypeptide with LDL receptor interaction domain, comprises detecting difference in stress-biased and unbiased interaction of peptide and domain in a system.
                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to B7-H1.2 or Butryophilin 2/3 polypeptides of human B7 polypeptide family and polymucleotides encoding such proteins. Sequences of the invention are useful for treating an immunological conditions (e.g., transplant rejection, graft-versus-host disease, allergy, asthma, inflammatory bowel disease, sepsis), diseases that are caused or exacerbated by T-cell mediated inflammation (e.g., Alzheimer's disease or atherosclerosis), autoimmune disease, sepsis), astemic lupus erythematosus, autoimmune disease, disease, psoriasis, multiple solerosis, autoimmune diabetes, diabetic neuropathy, theumatoid arthritis), bacterial or viral infections such as human immunodeficiency virus (HIV) infection, delayed reconstitution of T-cells, defects in T-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Butryophilin 2/3 polypeptide of the human B7 polypeptide for treating an immunological condition e.g. transplant
encoding a polypeptide which is believed to be cytostatic, antiinflammatory, immunosuppressive, antibacterial and virucidal. The composition and methods are useful for diagnosing, preventing and treating diseases such as proliferative (e.g. cancer), inflammatory, immune, metabolic, genetic, bacterial and viral diseases. The present sequence represents a human secreted protein. The present sequence is available on WIPOWEB and is not in the specification.

                                                                                                                                                                                                                                                                                                                                                                                                                      AAU91293
```

the invention relates to an isolate of yequally NOVI, 2a, 2b, 3a, 3b, 55, 55, 56, 56, 56, 56, 56, 57, 50, 7 and 8), a variant of NOVX, a mature form, or a variant of the mature form of NOVX. Also included are a polymorlectide encoding NOVX (or its complement), a vector comprising the polymorlectide encoding NOVX (or its complement), a vector comprising the polymorlectide, in a sample using the antibody, determining the presence of NOVX polymorlectide in a sample using a probe with binds to NOVX polymorlectide in a sample using a probe with binds to NOVX polymorlectide, in a sample using a probe with binds to NOVX polymorlectide, identifying a an agent which binds to NOVX (including modulators of NOVX) NOVX, the polymorlectide and the antibody are useful for diagnosing, treating or preventing a NOVX-cassociate selected from cardiomyopathy, atherosclerosis.

CC antibody are useful for diagnosing, treating or preventing a NOVX-cassociated disorder related to cell signal processing and metabolic graft versus host disease, Alzhamer's disease, stroke, Lesch-Nyhan cramplantation, allergies, systemic lupus erythematosus, haenophilia, cramplantation, allergies, systemic lupus erythematosus, haenophilia, cramplantation, allergies, systemic lupus erythematosus, and senophilia, parkinson's disease, Alzhamer's disease, hardonesties, paperceatitis, musculoskeletal disorders, pain, neuropsychiatric disorders, hypertension, wound hashing, obesity, growth and reproductive disorders, hypertension, wound chaling, obesity, growth and reproductive disorders, lung diseases and channocamal mapping, tissue typing, forensic biology), coperated in the specification. NOVX, as vaccines to product and the antibody are useful in screening assays, component (e.g., chromosomal mapping, tissue typing, forensic biology), coperated in a two-hybrid or three-hybrid assay; the antibodies immunospecific for NOVX, as vaccines to retend the antibodies immunospecific sessy, the antibodies immunospecific sessy, and principal ringene, hybrid or three-hyb membrane bound invention relates to an isolated cytoplasmic, nuclear,

Sequence 415 AA;

J. Sequence 87, Application US/09562737

J. Patent No. 6428967

J. GENERAL INFORMATION:

J. APPLICANT: Herz, Joachim

J. APPLICANT: Gotthardt, Michael

J. TITLE OF INVENTION: LDL Receptor Signaling Pathways

FILE REFERENCE: UTSW0708

J. CURRENT APPLICATION: LDL Receptor Signaling Pathways

CURRENT FILING DATE: 2000-05-01

J. NUMBER OF SEQ ID NOS: 132

J. SOFTWARE: PatentIn Ver. 2.1

J. SEQ ID NO 87

J. LENGTH: 1024

J. TYPE: PRT

J. CRGANISM: Artificial Sequence

FRATURE:

J. OTHER INFORMATION: Sequence

J. OTHER INFORMATION: Sequence

J. OTHER INFORMATION: Sequence
) ORGANISM: Artificial Sequence
; FEATURE:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Dermease [imported] - Sulfolobus solfataricus
C;Species: Sulfolobus solfataricus
C;Species: Sulfolobus solfataricus
C;Species: Sulfolobus solfataricus
C;Date: 24-May-2001 #sequence_revision 24-May-2001 #text_change 09-Jul-2004
C;Accession: E90446
R;She, Q.; Singh, R.K.; Confalonieri, F.; Zivanovic, Y.; Allard, G.; Awayez, M.J.; Chan-Yong, I.; Jeffries, A.C.; Kozera, C.J.; Medina, N.; Peng, X.; Thi-Ngoc, H.P.; Redder, Parrett, R.A.; Ragan, M.A.; Sensen, C.W.; Van der Oost, J.
A;Description: Sulfolobus solfataricus complete genome.
A;Reference number: A99139
A;Accession: E90446
A;Status: preliminary
A;Molecule type: DNA
A;Residues: 1-419 <KUR>
C;Genetics: UNIPROT: Q97VB7; GB:AE006641; NID:g13816037; PIDN:AAK42828.1; GSPDB:GR
